

Energy Policy

The Telecommunications Regulatory Authority (TDRA) of the United Arab Emirates (UAE) strives to use energy in the most efficient, cost-effective, and environmentally responsible manner possible.

Under this policy, the energy management plan will play a key role in supporting TDRA strategy to maximize profitability, strengthen TDRA competitive position, and provide customers with the highest quality products.

The energy policy shall state TRA's commitment to achieving energy performance improvement. Top management shall define the energy policy and ensure that TDRA abides by it. Additionally, TDRA commits to achieve the following objectives:

- Reduction of Greenhouse Gas (GHG)— Carbon Dioxide (Co2)— Emissions via proportionally reducing energy consumption.
- Demonstrating commitment to achieve sustainable infrastructure via using efficient loads & smart monitoring systems.
- Maximizing the energy performance; reduce operating expenses, and increase shareholder value by actively and responsibly manage energy consumption efficiently. To achieve the objectives, TDRA has complied with the fulfillment of the following acts:
- Compliance with all UAE Federal Energy Laws, Legal requirements, Regulations, and Codes of Practices issued by Ministry of Energy and affiliated bodies.
- Consolidating applications of local authorities' standards for existing operations, upgrading and new developments, working actively with resolutions to reduce consumption.
- Committed towards the compliance of Energy Management System established and utilizing the continual improvement opportunities identified.
- Committed to provide required resources in the form of human, infrastructure, equipment, tool and information related to Energy Management System on its purpose, requirements, practice, results, changes required and amended in the practices to the members of the organisation.
- Operating practices that seek to minimize impact through work and management practices, continual improvement, training and the use of new technologies.

- Committed for procurement of efficient-energy-products and services, and design for energy performance improvement, that factor in total lifecycle cost and energy saving.
- Improving employee's awareness and encouraging the sharing of experiences and expertise.
- Management review of energy objectives and targets
- Communication of this policy among the members of the organisation.
- Introducing Innovated-solutions with collaboration of major UAE flag ship projects in field of renewable energy, within the energy providers, and with other relevant bodies, community groups and neighbors about energy management matters of common concern.

TRA will endeavor to meet an energy management target to reduce energy intensity of its buildings inline with the UAE Vision 2021, National Agenda, Sustainable Environment and Infrastructure. This policy shall apply to all of TRA's facilities, employees, and contractors in service to TDRA sectors.

TRA shall review the Energy Policy annually and shall be updated, if it is required.
