Default Networking

About the Service/Feature

The Telecommunications Regulatory Authority and the Digital Government provide two types of network connectivity that connect government entities to the federal government network. One is the dedicated network connection (MPLS), which is an encrypted connection used to connect government entities through a private network with the highest service level standards. The other connection is the virtual network connection (VPN), which is done through the Internet to the FEDnet.

Service steps

Step 1 → Login using the UAE Pass

Step 2 → Submit the service application

Step 3 → Fill in the technical details questionnaire by the applicant

Step 4 → Review the application and questionnaire by a specialized team at the Authority

Step 5 → Get connected to FEDnet

Category	Variation
Type	Transactional
Expected Time	5 working days

About	TDRA provides two types of connectivity to connect government entities to FedNet. One is the Multiprotocol Label Switching (MPLS), which is an encrypted connection used to link government entities via a private network of the highest service level standards, while the other is virtual private networking (VPN), which is done online through FedNet. The linking mechanism is established based on the applicant's requirements and in coordination with the FedNet team.
